BIOLOGY

1) In human females, which hormone initiates the growth of Graafian follicles?

(1) LH
(2) FSH
(3) Estrogen
(4) Progesterone

2) What is the function of acrosome in sperm?

(1) Provides energy
(2) Releases enzymes to penetrate egg coverings
(3) Stores genetic material
(4) Helps in motility

3) Which of the following is an oral contraceptive pill?

(1) Saheli
(2) Lippes loop
(3) Multiload 375
(4) Copper-T

4) Which structure in the ovary ruptures during ovulation?

(1) Primary follicle
(2) Graafian follicle
(3) Corpus luteum
(4) Oocyte

5) Where does fertilization occur in humans?

(1) Uterus
(2) Ampulla of fallopian tube
(3) Cervix
(4) Vagina

6) Which cells provide nutrition to developing sperm in testes?

(1) Leydig cells
(2) Sertoli cells
(3) Spermatogonia

(4) Myoid cells

7) Which hormone is essential for maintenance of pregnancy?

(1) LH
(2) FSH
(3) Progesterone
(4) Relaxin

8) What is the function of corpus luteum?

(1) Production of HCG
(2) Production of progesterone
(3) Production of FSH
(4) Production of LH

9) What is the role of seminal vesicles?

(1) Sperm storage
(2) Secretion of fructose-rich seminal fluid
(3) Testosterone production
(4) Sperm maturation

10) Which of the following is a natural method of contraception?

(1) Condom
(2) Lactational amenorrhea
(3) Oral pills
(4) Copper-T

11) Which hormone stimulates milk ejection during breastfeeding?

(1) Prolactin
(2) Oxytocin
(3) LH
(4) Estrogen

12) What is the ploidy of primary oocyte in human females?

(1) Haploid (n)
(2) Diploid (2n)
(3) Triploid (3n)
(4) Tetraploid (4n)

13) Which part of the sperm provide in movement?

AIM : FREE EDUCATION TO ALL APUL

(1) Head
(2) Middle piece
(3) Tail
(4) Acrosome

14) What is the site of implantation in humans?

(1) Myometrium
(2) Endometrium
(3) Perimetrium
(4) Fallopian tube

15) Which of the following IUDs releases hormones?

(1) Multiload 375
(2) Lippes loop
(3) LNG-20
(4) Copper-T

16) Which hormone causes the thickening of the uterine wall during the menstrual cycle?

(1) Estrogen
(2) Progesterone
(3) LH
(4) Oxytocin

17) What is the normal site of spermatogenesis?

(1) Vas deferens
(2) Epididymis
(3) Seminiferous tubule
(4) Rete testis

18) What is the correct sequence of the menstrual cycle?

(1) Follicular → Ovulatory → Luteal → Menstrual
(2) Menstrual → Follicular → Ovulatory → Luteal
(3) Ovulatory → Luteal → Follicular → Menstrual
(4) Luteal → Follicular → Ovulatory → Menstrual

19) Which hormone prevents ovulation when present in high concentration?

(1) FSH
(2) LH
(3) Progesterone
(4) Oxytocin

AIM : FREE EDUCATION TO ALL APUL

AIM : FREE EDUCATION TO ALL APUL

20) Which part of the female reproductive system form birth canal?

(1) Cervix
(2) Uterus
(3) Cervix & Vagina
(4) Ovary

21) Which hormone maintains the corpus luteum during pregnancy?

(1) LH only
(2) FSH only
(3) hCG & LH
(4) Estrogen only

22) Which is the outermost layer of the uterus?

(1) Endometrium
(2) Perimetrium
(3) Myometrium
(4) Epimetrium

23) Which cells secrete testosterone in males?

(1) Sertoli cells
(2) Leydig cells
(3) Spermatogonia
(4) Epididymis

24) Which of the following is a surgical method of contraception?

(1) Condom
(2) Oral pills
(3) Vasectomy
(4) Diaphragm

25) What is the function of epididymis?

(1) Sperm storage and maturation
(2) Secretion of seminal fluid
(3) Testosterone production
(4) Spermatogenesis

26) Which hormone prepares the mammary glands for lactation?

(1) Oxytocin
(2) Prolactin

(3) Estrogen
(4) LH

27) What is the function of placenta in humans?

(1) Hormone secretion only
(2) Exchange of nutrients, gases and waste
(3) Prevents maternal immunity
(4) All of the above

28) Which layer of uterus undergoes cyclic changes during menstrual cycle?

(1) Perimetrium
(2) Myometrium
(3) Endometrium
(4) Chorion

29) Which ART involves transfer of zygote into the fallopian tube?

(1) ZIFT
(2) GIFT
(3) IVF-ET
(4) ICSI

30) Amniocentesis help to detect Down's syndrome because

(1) Mutation in X chromosome
(2) Extra copy chromosome 21 is visible
(3) Deletion in chromosome 18
(4) Triploidy

31) Which of the following is a permanent method of contraception in females?

(1) Tubectomy
(2) Vasectomy
(3) Oral pills
(4) Copper-T

32) What is the chromosomal constitution of a human sperm?

(1) 44 + XX
(2) 44 + XY
(3) 22 + X or 22 + Y
(4) 44 only

33) Which hormone is synthesize by hypothalamus?

AIM : FREE EDUCATION TO ALL APUL

(1) Estrogen
(2) Oxytocin
(3) Prolactin
(4) Progesterone

34) Where does mitosis and meiosis occurs?

(1) Epididymis
(2) Seminiferous tubules
(3) Rete testis
(4) Vas deferens

35) What is the function of the amnion during pregnancy?

(1) Forms placenta
(2) Secretes hormones
(3) Protects embryo from shocks
(4) Helps implantation

36) Which of the following is a side effect of using oral contraceptive pills?

(1) Increased ovulation
(2) Weight gain
(3) Increased fertilization
(4) None

37) Which assisted reproductive technique is used for female infertility due to blocked oviducts?

(1) ICSI
(2) ZIFT
(3) IUT
(4) Both 2 and 3

38) Which event occurs first after sperm entry into egg?

(1) Zygote formation
(2) Cortical reaction
(3) Cleavage
(4) Blastocyst formation

39) What is the function of relaxin hormone during pregnancy?

(1) Induces ovulation
(2) Dilates cervix and relaxes pelvic ligaments
(3) Stimulates milk secretion
(4) Inhibits FSH

AIM : FREE EDUCATION TO ALL APUL

AIM : FREE EDUCATION TO ALL APUL

40) Which of the following is a symptom of sexually transmitted infection (STI)?

(1) Weight gain
(2) Discharge from genital tract
(3) Sneezing
(4) Headache

41) Which hormone maintains the endometrium during pregnancy?

(1) Estrogen
(2) Progesterone
(3) LH
(4) FSH

42) Which of the following is NOT a barrier method of contraception?

(1) Condom
(2) Cervical cap
(3) Copper-T
(4) Diaphragm

43) Where does implantation of the blastocyst occur?

(1) Ovary
(2) Uterus
(3) Cervix
(4) Oviduct

44) What prevents polyspermy during fertilization?

(1) Acrosome reaction
(2) Cortical reaction
(3) Capacitation
(4) Cleavage

45) Which of the following is an example of permanent birth control method?

(1) Condom
(2) Copper-T
(3) Vasectomy
(4) Oral pills

46) Identify the hormone secreted by the placenta:

(1) hCG
(2) LH

(3) FSH
(4) Oxytocin

47) What is colostrum?

(1) Hormone from placenta
(2) Thick yellow fluid secreted by mammary glands after childbirth
(3) Enzyme in sperm
(4) Hormone stimulating labor

48) Name the hormone that stimulates milk secretion:

(1) Oxytocin
(2) Prolactin
(3) Estrogen
(4) Relaxin

49) Which hormone causes contraction of uterus?

(1) Oxytocin
(2) Prolactin
(3) Estrogen
(4) LH

50) Identify the correct sequence:
(a) Ovulation → (b) Fertilization → (c) Cleavage → (d) Implantation

(1) a → b → c → d
(2) a → c → b → d
(3) b → a → c → d
(4) a → b → d → c

51) Which of the following is a surgical contraceptive method for females?

(1) Vasectomy
(2) Tubectomy
(3) Copper-T
(4) Cervical cap

52) Which of the following is NOT a feature of semen?

(1) Contains fructose
(2) Alkaline in nature
(3) Secreted by prostate gland
(4) Produced only by testes

AIM : FREE EDUCATION TO ALL APUL

AIM : FREE EDUCATION TO ALL APUL

53) Mucus and HCO_3^- ions are secreted by?

(1) Testis
(2) Cowper's gland
(3) Vas deferens
(4) Seminal vesicle

54) Where are Leydig cells located?

(1) Inside seminiferous tubules
(2) Outside seminiferous tubules
(3) In epididymis
(4) In seminal vesicle

55) Which of the following methods is used for detection of genetic abnormalities in the fetus?

(1) Amniocentesis
(2) ZIFT
(3) GIFT
(4) IVF

56) Name the structure that connects the fetus with the placenta:

(1) Umbilical cord
(2) Amnion
(3) Chorion
(4) Allantois

57) Which of the following is a function of placenta ?

(1) Storage of urine
(2) Exchange of nutrients and gases
(3) Production of sperm
(4) Formation of yolk

58) What is the function of fimbriae in female reproductive system?

(1) Secretes estrogen
(2) Helps in collection of ovum after ovulation
(3) Produces progesterone
(4) Stores ovum

59) Which of the following hormones is secreted during lactation ?

(1) Oxytocin and Prolactin
(2) LH and FSH

(3) Estrogen and LH
(4) Relaxin and FSH

60) What is the main function of seminal vesicles ?

(1) Produce sperm
(2) Store sperm
(3) Secrete fructose-rich fluid
(4) Secrete testosterone

61) Where does fertilization normally occur in humans ?

(1) Uterus
(2) Cervix
(3) Ampulla of oviduct
(4) Vagina

62) Which hormone is essential for ovulation ?

(1) FSH
(2) Estrogen
(3) Progesterone
(4) Prolactin

63) Identify the correct pair :

(1) Relaxin – Initiates ovulation
(2) Inhibin – Stimulates FSH
(3) Progesterone – Maintains pregnancy
(4) Estrogen – Maintains lactation

64) Which of the following is the outermost covering of the testis?

(1) Tunica albuginea
(2) Tunica vaginalis
(3) Scrotum
(4) Epididymis

65) How many sperms are generally ejaculated in a single ejaculation?

(1) 20–30 million
(2) 50–100 million
(3) 200–300 million
(4) 1 million

66) What is the gestation period in humans ?

AIM : FREE EDUCATION TO ALL APUL

(1) 180 days
(2) 240 days
(3) 280 days
(4) 300 days

67)

Which hormone is secreted by Sertoli cells?

(1) Testosterone
(2) Inhibin
(3) Oxytocin
(4) Relaxin

68) Identify the correct sequence of embryonic development:
(a) Morula
(b) Blastocyst
(c) Zygote
(d) Gastrula

(1) c → a → b → d
(2) a → c → b → d
(3) c → b → a → d
(4) b → a → c → d

69) What is the role of the prostate gland in semen ?

(1) Adds fructose
(2) Adds alkaline fluid for sperm motility
(3) Produces testosterone
(4) Forms acrosome

70) Which method is effective in preventing both pregnancy and STDs?

(1) Oral pills
(2) Copper-T
(3) Condom
(4) Vasectomy

71) Which hormone triggers parturition ?

(1) Progesterone
(2) Estrogen
(3) Oxytocin
(4) Relaxin

72) What is lactational amenorrhea?

AIM : FREE EDUCATION TO ALL APUL

(1) Menstruation during lactation
(2) Absence of menstruation during breastfeeding
(3) Overproduction of milk
(4) Hormonal imbalance during pregnancy

73) Which one is a copper-releasing IUD?

(1) Lippes loop
(2) Multiload 375
(3) LNG-20
(4) Norplant

74) Name the hormone tested in urine for pregnancy detection.

(1) LH
(2) FSH
(3) hCG
(4) Progesterone

75) Which organelle forms the acrosome in sperm ?

(1) Mitochondria
(2) Golgi complex
(3) Nucleus
(4) Centriole

76) What is the function of LH hormone?

(1) Milk secretion
(2) Dilation of cervix and relaxation of pelvic ligaments
(3) Initiates ovulation
(4) Enhances sperm motility

77) Which phase of the menstrual cycle is the most fertile period?

(1) Follicular phase
(2) Ovulatory phase
(3) Luteal phase
(4) Menstrual phase

78) Which of the following is an example of an induced abortion technique?

(1) IVF
(2) MTP
(3) GIFT
(4) ZIFT

AIM : FREE EDUCATION TO ALL APUL

AIM : FREE EDUCATION TO ALL APUL

79) What is spermiogenesis ?

(1) Formation of spermatogonia
(2) Formation of spermatids
(3) Transformation of spermatids into spermatozoa
(4) Formation of sperm from zygote

80) Which hormone inhibits secretion of FSH ?

(1) Testosterone
(2) Inhibin
(3) Progesterone
(4) Oxytocin

81) **Assertion (A)** : LH surge is essential for ovulation in human females.
Reason (R): LH surge induces rupture of Graafian follicle and release of secondary oocyte.

(1) Both A and R are true, and R is the correct explanation of A
(2) Both A and R are true, but R is not the correct explanation of A
(3) A is true, but R is false
(4) A is false, but R is true

82) Which of the following statements is/are correct about colostrum?
(a) It is secreted during late pregnancy and few days after childbirth.
(b) It contains antibodies providing passive immunity to newborn.
(c) It has no proteins.

(1) Only (a) and (b)
(2) Only (a)
(3) Only (c)
(4) All of the above

83) Observe the flow and fill in the blank:
Spermatogonia → Primary spermatocyte → Secondary spermatocyte → ? → Spermatozoa
What fills the blank?

(1) Spermatid
(2) Zygote
(3) Oogonium
(4) Sertoli cell

84) A woman missed her menstrual cycle and confirmed pregnancy. Which hormone in her urine will indicate this condition?

(1) Progesterone
(2) Estrogen
(3) hCG

(4) LH

85) **Assertion (A):** Copper-T acts as a contraceptive by killing sperms.
Reason (R): Copper ions released by the device increase phagocytosis of sperms in uterus.

(1) Both A and R are true, and R is the correct explanation of A.
(2) Both A and R are true, but R is not the correct explanation of A.
(3) A is true, but R is false.
(4) A is false, but R is true.

86) Select the incorrect statement about menstrual cycle :
(a) Ovulation occurs in the luteal phase.
(b) Estrogen peaks before ovulation.
(c) Progesterone is secreted by corpus luteum.

(1) (a) Only
(2) (b) Only
(3) (c) Only
(4) None

87) Identify the correct sequence of embryonic membranes:
Blastocyst → ? → Chorion → Amnion → Yolk sac

(1) Trophoblast
(2) Inner cell mass
(3) Placenta
(4) Zona pellucida

88) Doctors observed a couple had low sperm motility in semen analysis. Which ART technique should be suggested?

(1) IVF
(2) ZIFT
(3) ICSI
(4) GIFT

89) **Assertion (A) :** Vasectomy prevents spermatogenesis.
Reason (R) : Vasectomy involves cutting vas deferens, so sperm cannot reach ejaculatory duct.

(1) Both A and R are true, and R is the correct explanation of A.
(2) Both A and R are true, but R is not the correct explanation of A.
(3) A is true, but R is false.
(4) A is false, but R is true.

90) Which statements about lactational amenorrhea are true?
(a) It is based on natural method during lactation.
(b) Effective up to 6 months postpartum.

AIM : FREE EDUCATION TO ALL APUL

(c) It requires hormonal pills.

(1) (a) and (b)
(2) (a) and (c)
(3) (b) only
(4) All of the above

AIM : FREE EDUCATION TO ALL APUL

AIM : FREE EDUCATION TO ALL APUL

BIOLOGY

AIM : FREE EDUCATION TO ALL APUL

1) Follicle Stimulating Hormone from anterior pituitary stimulates follicular growth and estrogen secretion.

2) Acrosome contains hydrolytic enzymes like hyaluronidase for fertilization.

3) Saheli contains centchroman, a non-steroidal contraceptive pill.

4) The mature Graafian follicle ruptures to release the secondary oocyte.

5) Fertilization occurs at the ampullary-isthmic junction.

6) Sertoli cells in seminiferous tubules nourish developing sperms.

7) Progesterone maintains endometrium and prevents uterine contractions.

8) Corpus luteum secretes progesterone after ovulation.

9) Seminal vesicles secrete fructose providing energy for sperm motility.

10) Lactational amenorrhea is based on natural infertility during breastfeeding.

11) Oxytocin from posterior pituitary causes contraction of mammary glands for milk ejection.

12) Primary oocyte is diploid and formed during fetal development.

13) Tail provides motility to sperm to reach the egg.

14) Blastocyst implants into the endometrium of the uterus.

15) LNG-20 releases levonorgestrel, a hormone-based contraceptive.

16) Estrogen secreted during follicular phase causes proliferation of endometrium.

17) Spermatogenesis occurs inside seminiferous tubules of testes.

18) The cycle begins with menstruation, followed by follicular, ovulatory, and luteal phases.

19) High progesterone levels provide negative feedback to suppress ovulation.

20) Fertilization usually occurs in the ampullary region of the fallopian tube.

21) Human chorionic gonadotropin secreted by trophoblast maintains corpus luteum.

22) Uterus has three layers: endometrium (inner), myometrium (middle), perimetrium (outer).

23) Leydig cells in interstitial spaces of testes secrete testosterone.

24) Vasectomy involves cutting vas deferens in males, preventing sperm transport.

25) Epididymis stores sperms temporarily and allows maturation.

26) Prolactin from anterior pituitary stimulates milk secretion.

27) Placenta secretes hormones, exchanges substances, and acts as immunological barrier.

28) Endometrium thickens under hormonal control and sheds during menstruation.

29) Zygote Intra-Fallopian Transfer is done after in vitro fertilization.

30) Down’s syndrome is caused by trisomy of chromosome 21.

31) Tubectomy involves cutting fallopian tubes, permanently preventing fertilization.

32) Human sperm carries either X or Y chromosome along with 22 autosomes.

33) Prolactin stimulates mammary glands to produce milk after childbirth.

34) Seminiferous tubules contain germinal epithelium where spermatogenesis occurs.

35) Amnion surrounds embryo with fluid, providing cushioning.

36) Oral pills can cause minor side effects like weight gain, nausea, and headache.

AIM : FREE EDUCATION TO ALL ❤ APUL

37) IVF-ET and ZIFT bypass the oviduct and transfer embryo or zygote.

38) Cortical reaction prevents polyspermy immediately after sperm entry.

39) Relaxin facilitates childbirth by softening cervix and pelvic ligaments.

40) STIs often show symptoms like discharge, ulcers, and pain during urination.

41) Progesterone secreted by corpus luteum and later placenta maintains endometrium.

42) Copper-T is an intrauterine device, not a barrier method.

43) Implantation occurs in the endometrium of the uterus.

44) Cortical granules modify the zona pellucida to block entry of additional sperms.

45) Vasectomy is a surgical sterilization method for males.

46) Human chorionic gonadotropin (hCG) is secreted by the placenta.

47) Colostrum is rich in antibodies and provides immunity to the newborn.

48) Prolactin from anterior pituitary stimulates milk production.

49) Oxytocin stimulates contraction of mammary alveoli for milk ejection.

50) Fertilization occurs after ovulation; cleavage forms morula → blastocyst → implantation.

51) Tubectomy involves cutting and tying fallopian tubes in females.

52) Semen is a mixture of sperm and glandular secretions, not only from testes.

53) Epididymis stores and matures sperm before ejaculation.

54) Leydig cells lie in interstitial spaces and secrete testosterone.

55) Amniocentesis analyzes fetal cells from amniotic fluid for genetic disorders.

AIM : FREE EDUCATION TO ALL ♥ APUL

56) Umbilical cord transports nutrients and oxygen between placenta and fetus.

57) Placenta provides nutrients and oxygen and removes waste from fetal blood.

58) Fimbriae sweep the ovum into the fallopian tube after ovulation.

59) type explanation

60) Seminal vesicles provide energy for sperm motility through fructose secretion.

61) Fertilization usually occurs in the ampullary-isthmic junction of the fallopian tube.

62) LH surge in mid-cycle induces ovulation.

63) Progesterone from corpus luteum maintains the endometrium for pregnancy.

64) Tunica vaginalis is the outermost protective layer of testis.

65) A single ejaculation releases about 200–300 million sperms in humans.

66) Human gestation lasts about 9 months or 280 days.

67)

Sertoli cells secrete inhibin to inhibit FSH secretion and regulate spermatogenesis.

68) Zygote → Morula → Blastocyst → Gastrula.

69) Prostate gland secretes an alkaline fluid to neutralize vaginal acidity.

70) Condoms provide a physical barrier preventing pregnancy and STDs.

71) Oxytocin induces strong uterine contractions during childbirth.

72) Lactational amenorrhea is a natural contraceptive method for a few months postpartum.

73) Copper IUDs release copper ions that impair sperm motility and fertilization.

74) Pregnancy tests detect hCG secreted by the placenta in urine.

AIM : FREE EDUCATION TO ALL ♥ APUL

75) Acrosome develops from Golgi and contains hydrolytic enzymes.

76) Relaxin facilitates childbirth by softening pelvic ligaments and cervix.

77) Ovulation occurs around day 14; chances of fertilization are highest.

78) Medical Termination of Pregnancy is an induced abortion method.

79) Spermiogenesis involves differentiation of spermatids into functional sperm.

80) Inhibin secreted by Sertoli cells inhibits FSH to regulate spermatogenesis.

81) NCERT diagram of menstrual cycle shows LH surge before ovulation.

82) NCERT clearly states colostrum is rich in proteins and antibodies

83) Refer NCERT diagram of spermatogenesis; spermatids form after meiosis II.

84) Urine pregnancy test detects hCG secreted by trophoblast.

85) NCERT mentions copper ions enhance phagocytosis of sperms.

86) Ovulation occurs between follicular and luteal phases.

87) NCERT shows trophoblast develops into chorion.

88) ICSI involves injecting a sperm directly into an ovum.

89) Vasectomy blocks sperm transport but does not stop spermatogenesis.

90) Lactational amenorrhea is a natural method, no pills are needed.

AIM : FREE EDUCATION TO ALL ❤ APUL
